

To Airport/Airline Security Inspectors:

The patient named below has hemophilia, which is a congenital bleeding disorder due to coagulation factor deficiency. In case of internal bleeding or traumatic bleeding, prompt self-injection of coagulation factor drug is required.

The patient needs to travel with required amounts of coagulation factor products for immediate use in case of emergency. It is therefore necessary for the patient to bring the specified coagulation factor drugs and injection needles on the plane as hand luggage so that the patient may self-inject the coagulation factor drugs on board, when necessary. Otherwise the patient could suffer from life-threatening medical conditions if bringing the coagulation factor products and injection needles on the plane is not permitted.

Your understanding and cooperation will be greatly appreciated.

Patient's name : **Ichiro Suzuki**

Disease : **Hemophilia A**

Drug to bring on the plane : **Recombinant coagulation factor VIII product**

Attending Physician in Japan

Physician's signature : **主治医の署名**

Physician's name : **主治医の氏名(ローマ字)**

Physician's institution and department :
